Meeting Agenda							

• Share some tools to draw class diagram and discuss about code reading progress

- Assign codes to team members
- Review UML tools for Python
 - Pynsource
 - * Easy to use with GUI
 - * Fails to edit the class diagram in community edition
 - * Fails to track the dependency across multiple files
 - Pyreverse
 - * Free and open-source.
 - * Fails to capture some dependencies (e.g. when class A stores instances of class B in a list instead of directly holding the reference).
 - * Fails to generate complete diagram for some files (with errors)
 - * Another open source tool, graphviz2drawio, can convert the .dot file generated by Pyreverse to a format editable by draw.io, but it does not work.
 - Start from scratch on draw.io
 - * draw class diagram by hand
 - * very time-consuming (took almost 20 hrs to finish reading and drawing class diagram for a 1000 lines python file)

• Code reading progress
